Future-Proof Your NIS Compliance

Embrace Continuous Improvement to Forge a Path Towards Sustainable Compliance and Cyber Resilience.

Mapping the Path to Sustainable Compliance

Continuous improvement isn't just a recommendation; it's essential for NIS compliance. Kumoco will provide a quarterly audit and assessment of your cyber security posture and provide recommendations on how to adopt any required changes effectively.

Kumoco Continuous Improvement:
1. Regular Review and Assessment: Every three months Kumoco will, assess your cyber security posture, gain feedback from employees and stakeholders, and actively learn from security incidents. Regular reviews help identify vulnerabilities and areas for improvement, allowing for adjustments to security policies to be made.

2. Implement Changes and Staying Updated: In today's rapidly evolving threat landscape, it's crucial to stay updated on any amendments to NIS and other regulatory requirements. Kumoco will review and update your security policies as necessary.

3. Training and Development: Kumoco will update training documentation with regulatory updates, and provide the tools to train employees and cultivate a culture of security awareness within your organisation.

4. Measure progress through Key Performance Indicators (KPIs): Benchmark against industry standards to gauge the effectiveness of your NIS compliance.

By following these strategies, organisations can maintain NIS compliance with a strong and adaptable cyber security posture that effectively safeguards their network and information systems against evolving threats.
